Air Inlet Duct

#5230 Date 01/04/05 rev. 0

Parts

- 1 ea. Duct mount
- 2 ea. Clamps
- 1 ea. Gasket

1. Use 7/16" wrench to remove the four nuts holding the heater to the firewall. You do not have to remove the heater hoses.
2. Disconnect the original heater air inlet duct from the kick panel by pulling on the plastic strap lock.
3. From the inside of the Bronco, pull heater out slightly to give yourself access to reach the seven screws which hold the original duct to the heater.
4. Use 5/16" socket to remove the seven screws and remove the old duct and gasket.
5. Position the new duct mount and gasket to the heater and use the same seven screws to attach the new duct mount.
6. Use a 7/16" wrench to bolt the heater back to the firewall.
7. Clamp the duct to the kick panel and duct mount using the large hose clamps.
